Hike #355

SERRANO VALLEY LOOP  
from Sycamore Canyon  
Campground

Maps:	Point Mugu, topo Triunfo Pass, topo
Distance:	8½ miles roundtrip
Elevation:	1100' gain and loss
Terrain:	Steep trail and road
Time:	3-3/4 hours
Trailhead:	Sycamore Canyon

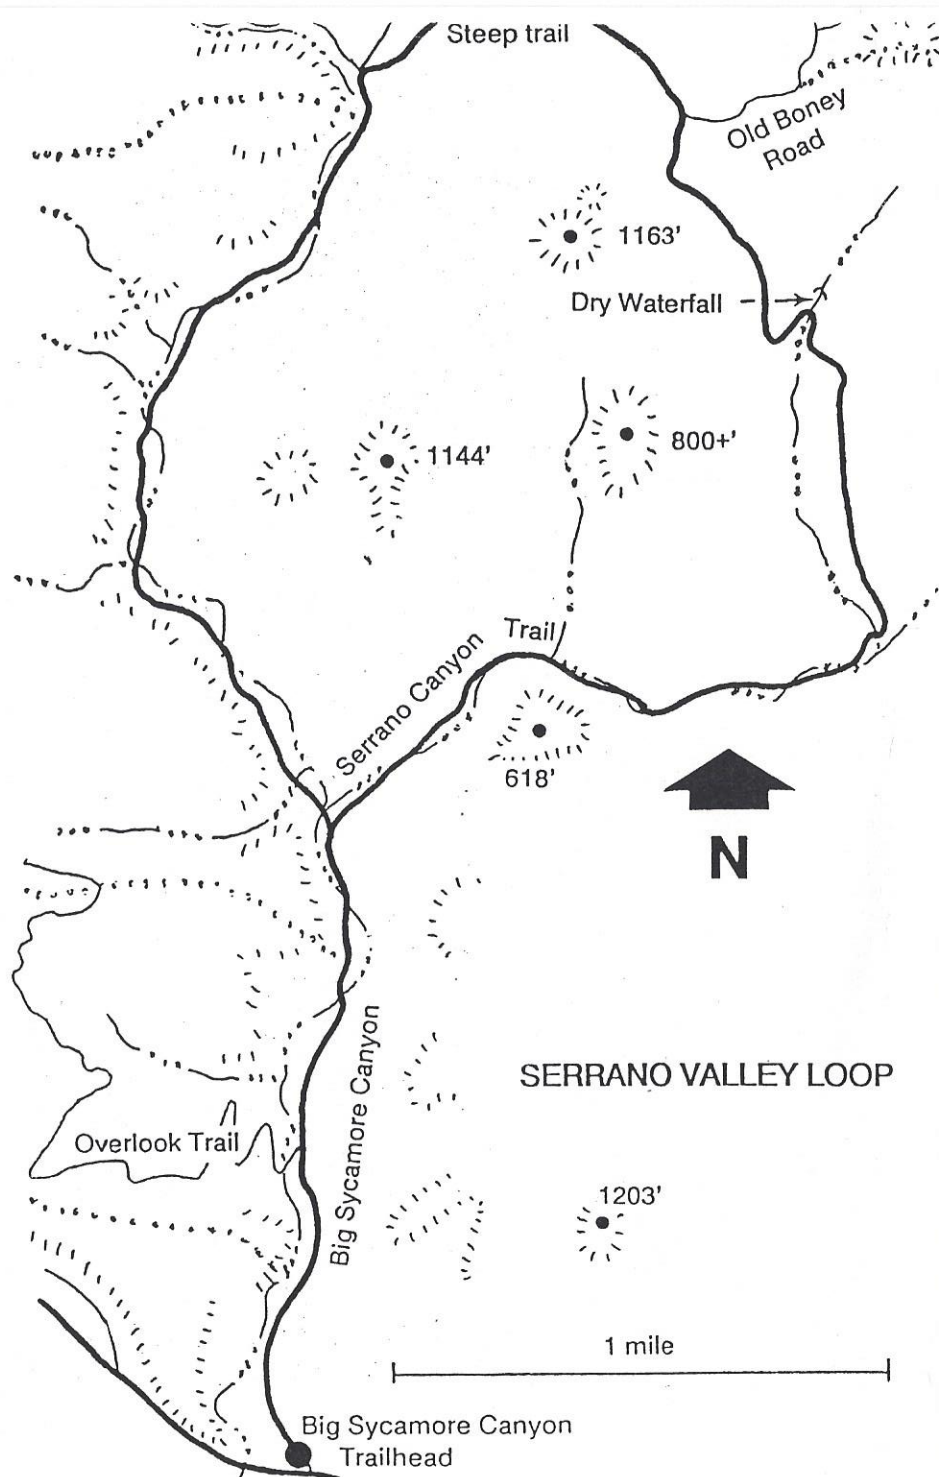

This is a moderate trip taking you through some of the most scenic parts of the center of the Park. Big Sycamore Canyon with its large trees, Serrano Canyon with dense foliage, an open field, a ridge, and a large expanse of chaparral present a variety of plant forms.

Reach the trailhead by driving 20 miles west of the Malibu Canyon Road on the Pacific Coast Hwy to Sycamore Canyon. Park outside the gate.

Walk through the campground and upstream on the Big Sycamore Canyon Trail. A mile and a half after leaving the campground you will pass the Serrano Canyon Trail on the right. That will be the trail that you will come down later. Continue up the gently graded Sycamore Canyon, occasionally crossing the stream. This part of the canyon is wide, and is typical of this outstanding sycamore savannah. Deep grass under spreading trees, deer tracks and on occasion a deer, a couple of acorn woodpeckers sitting on Sycamore branches making short flights if you walk up close, a ground squirrel; all these make this eco-system a vibrant, live and interesting place to visit. One hour after leaving the trailhead you will be near the Wood Canyon Trail junction. Several trails branch out from the main trail in this area; the one that you will be taking is on the right and is a trail, not a road.

The initial view of this trail is shocking after the previous level walking. The trail goes up a steep ridge relentlessly gaining 800 feet before reaching a level area near Old Boney Road. There is some consolation in the spectacular view of Sycamore Canyon.

**WE MAY WALK THE ROAD —**

Once on the ridge dividing Sycamore and Serrano Canyons, you can see the grasslands of Serrano to the southeast and Boney Mountain with its many peaks jutting out to the east. A chaparral plant community dominates the ridge and the slope to the north.

Take the road south downhill into Serrano Valley. This road drops 350', then makes a left turn around a shoulder and goes across an intermittent stream coming down from a prominent rock waterfall. After crossing the stream and making a right turn, the road climbs for a few minutes, leveling off on the shoulder of a grassy ridge that slopes to the south. Walk south on the ridge (there may be no trail because the grass grows fast) heading for a prominent Sumac tree. Look for the trail to the right of the tree, but do not be concerned if you can't find it — just continue south on the highest part of the downhill sloping ridge. When the ridge levels out, the trail angles to the right and meets the trail that goes down Serrano Canyon. An old fence line divides the grassland from the chaparral. It is near the fence line that you can pick up the well-defined trail into the canyon.

The trail goes through some chaparral, then very quickly enters the canyon environment of shaded trails, pools of cool water, and luxuriant vegetation. Serrano Canyon is a steep-walled, solid rock, water formed gorge, connecting the higher Serrano Valley with the Sycamore Canyon downstream. The footing is good in most places. Some stream crossings might present a problem, depending upon the level of the water. Some low hanging branches can be a hazard, and keep a lookout for Poison Oak.

Upon reaching the Big Sycamore Canyon Trail, turn left and return to the trailhead.
